MIE Dashboard

Mie Docs Dashboard

Using Mie Docs Dashboard will help you navigate and open the widgets on the dashboard.

Mie Docs

Seamless integration into windows explorer which makes integrating with your documents in their native program simple. Right Click, drag-n-drop, cut-and-paste are all available through the virtual MIE Docs drive.

Tasks

My Tasks has 4 different options that show up they are *My Tasks *Completed Tasks *Assigned By Me *Assigned By Me Completed.

Notes

Create Notes by a simple click on the Note widget and post them on your desktop. You could also turn a note into a Task and assign it to an individual.

Chat

Chat enables you to chat within the company only. Chats can also follow the history of a document.

MIE Docs is a revolutionary file management system designed for a single user up to an organization of 100's of users. File management systems are designed to solve the problems associated with storing, managing, finding and tracking files used throughout an organization. Organizations with hundreds of thousands of lose files each day when files are stored on multiple computers, hard drives and backups. MIE Docs File Management lowers the costs of handling and storing your documents and saves staff time by providing both instant access to your documents and business process automation. MIE Docs centralizes the storage of files into an easy to use virtual drive.

- There is a seamless integration into windows explorer which makes integrating with your documents in their native program simple. Right Click, drag-n-drop, cut-and-paste are all available through the virtual MIE Docs drive.
- Metadata can be added to each file allowing complex searching where files can be browsed by any of the metadata. Metadata is 100% user defined by attributes and attribute groups.
- There is full revision control and history of each file that is modified. Old revisions can be viewed and even rolled back to a prior document state.

MIE Docs is a great tool for your entire company. Engineering, sales, accounting and human resource departments can manage their documents. MIE Docs handles the ability for a laptop to check out a file, disconnect from the network and make changes and then check the file back in once the laptop has access to the repository. File types and attributes are 100% customizable by the end user which allows the freedom to create and store any type of metadata with a file. This could include dates, text, true/false values and even dropdown list boxes.

Simple To Get Started

With the virtual drive MIE Docs lets you quickly get started by allowing you to overlay it on the existing file library structure. You also can drag-n-drop files from your current desktop file system into the MIE Docs file system. Once the files are linked or in MIE Docs they can easily be retrieved, checked out and modified.

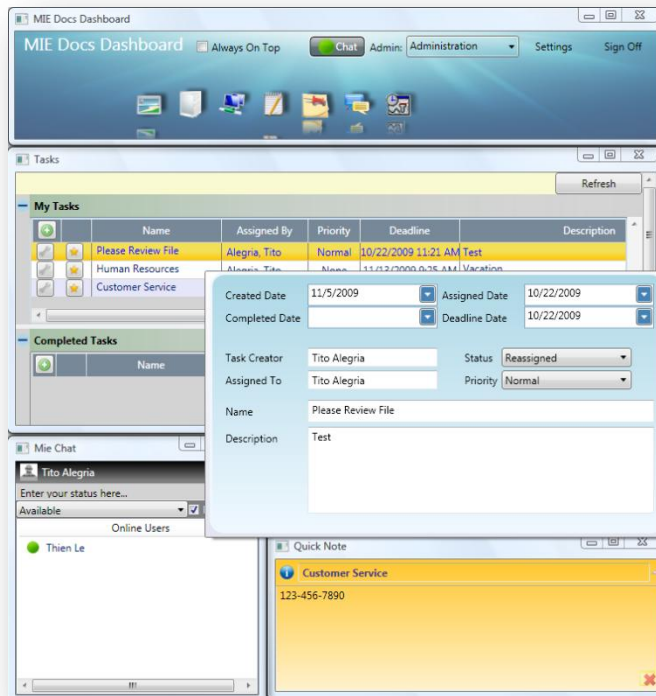

Integration

MIE Docs integrates out of the box with MIE Trak (MIE Solution's ERP System). Integration is done through an API which can be called by any 3rd party application.

SQL Server Database

MIE Docs runs on the standard SQL server database which is fast and flexible. The server installation will create and update the database without any scripts or database management skills.

Screenshots, Features and Benefits

Adding Up the Benefits

- Lower costs of doing business by removing error prone file management.
- Securely store files in a managed file system.
- Quickly find documents through extensive search mechanisms.
- Check-out and check-in files for full history of file changes.
- There is a full integration capability with windows applications through the use of the virtual drive mapping.
- Application Programming Interface (API) which allows third party applications to access files.
