Letter From The President

This is our 2nd edition of the newsletter since the start of the company in late 2007. I am proud to announce that everything is moving forward as planned. I want to start by saying thank you for being loyal customers, and wish all our customers great success in using the MIE Trak product to enhance your company operations.

MIE Solutions want to keep our users more informed about the evolution of the existing software packages, and provide sneak previews of new software products. We welcome feedback on what we are doing and what additional features or software programs you would like developed to assist you in managing your manufacturing processes

In this newsletter you will find information on new products like MIE Exchange, MIE Fileadex and the DOT Net rewrite of MIE Trak. We at MIE Solutions hope this information will be valuable to you.

We look forward to working with you in the future.

MIE Trak 10.1

MIE Trak version 10.1 will be released this coming May with a number of new features and bug fixes. At the current count there are over 75 items that have been added, fixed or modified for the 10.1 version. MIE Trak is becoming more stable based on a lot of feedback from you the customers.

There are three major changes in this version of MIE Trak

1. Work order nesting rewrite adds the ability to issue material, track nests and multiple sequences on a single nest.
2. Wireless barcoding for finished goods inventory control.
3. The work order screen is larger and requires a higher resolution monitor.

The next release of MIETrak will be in the 4th quarter and will hopefully bring about as many good changes as the previous few releases.

We are always striving to make a better product to serve your needs.

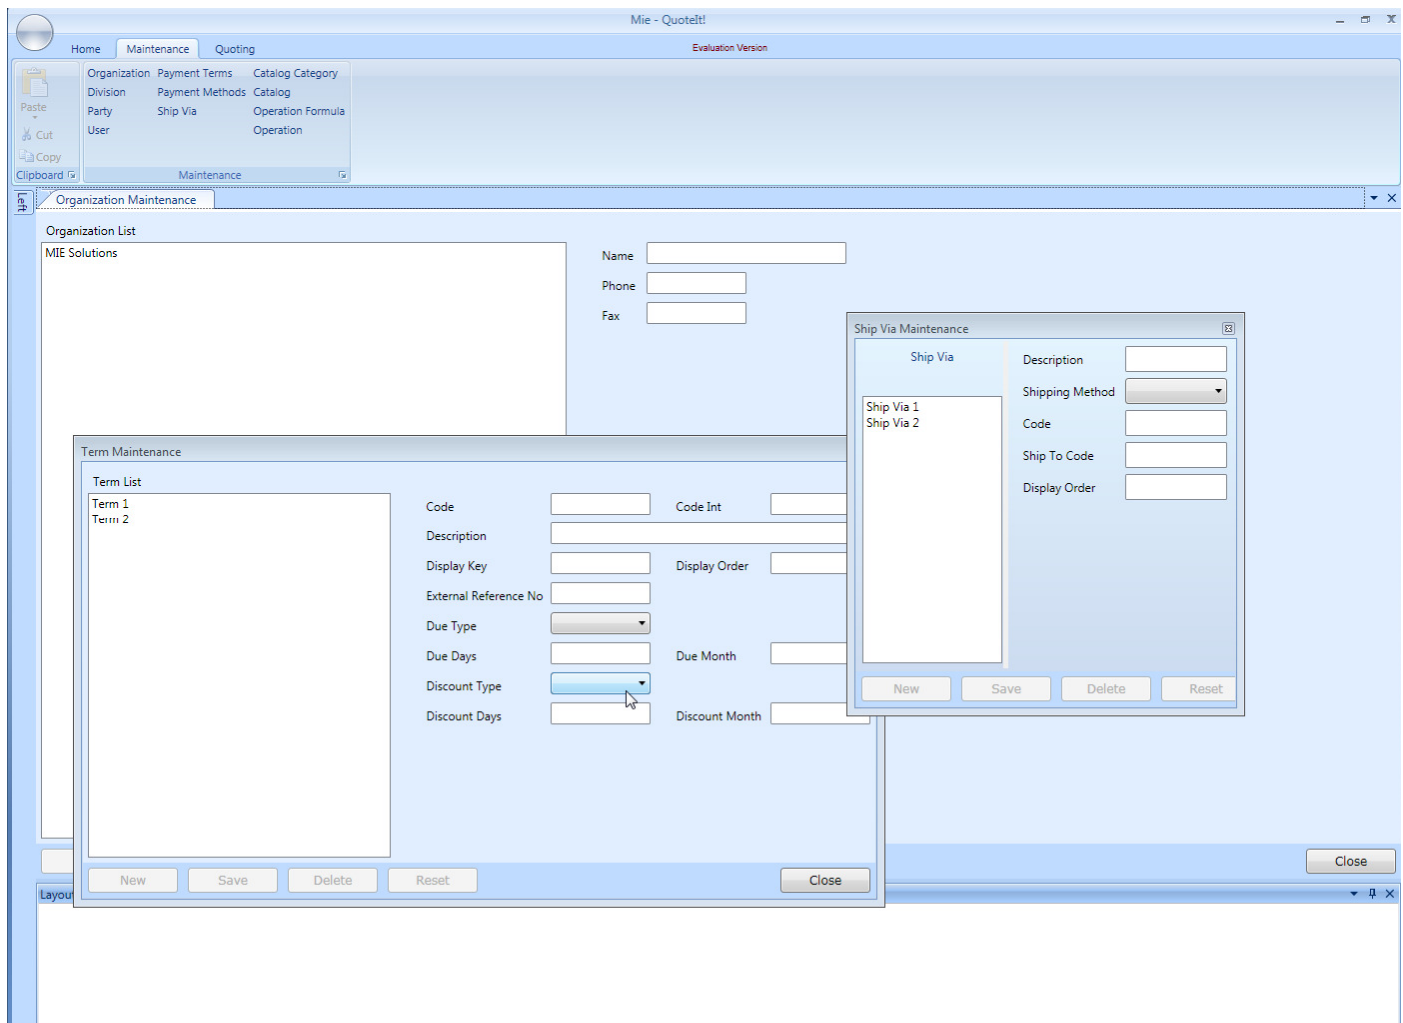

MIE Fileadex

MIE Files is a simple to use document and data management program to help keep track of the hundreds of thousands of files you have floating around your network. It's simple to use interface is tightly integrated into the windows file system which enables any and all windows packages to make use of this product to manage their files. Managing all the files starting with models, cad files, part files, sheet files and NC files is made easy through this simple to use package.

This product is on track to be in BETA by June 1, 2008. If your company is interested in testing this new piece of software email sales@mie-solutions.com to be put on the beta list.

Quoting Rewrite

We have started rewriting the quoting module in SQL database format using C# Dot Net programming language. This is the first step to rewriting the entire MIE Trak software into SQL. We hired two programmers in March that are dedicated to the MIE Quotelt! rewrite. The program should be ready for BETA testing sometime in the 4th quarter of 2008 or possibly sooner. This rewrite is designed to be integrated with the new MIE Exchange software discussed on the previous page.

Information

MIE Solutions is dedicated to giving you the best support possible. We strive for excellence and our goal is 100% customer satisfaction. If you have items you need to discuss with us please open up a case log in the Netsuite case management tool and we will reply back with a responses. Feel free to call in after entering a case if it is an urgent issue if you have Tier I or Tier II support.

When we came out with our first newsletter in October/November we were heralding a number of new features that were going to be added to the newly renamed MIE Trak, formerly FabriTRAK. Here's our track record so far.

We released version 10.0.9 the 1st of November 2007

Changes to the release included:

- Scheduling options added, Backward Infinite, Backward Finite/Forward Infinite
- MRP module rewritten
- Added Ethernet barcode terminals, wired and wireless

We released version 10.0.10 the 15th of February 2008

Changes to the release included:

- Scheduling options added, Backward Finite/Backward Infinite/Forward Infinite
- E-mailing directly out of MIE Trak
- Exporting most queries to Excel spreadsheet format
- Administration Tool to send message to users to exit MIE Trak, and then to log everyone out and lock them out while maintenance is performed.

We are planning to release version 10.1 the 2nd Quarter

Changes in this release include:

- Work Order Nesting rewrite to add issuing material and tracking of nests.
- Wireless bar-coding of Finished Goods parts into a location, out of a location and to do physical counts.

We are planning to release version 10.2 the 4th Quarter

Changes planned for the release include:

- UPS/FedEx Integration with MIE Trak
- Scanview/White Board rewrite

About Our Organization...

MIE Solutions is dedicated to providing software to the manufacturing industry which improves the communication, reporting, employee efficiency and profitability of our customers. Our integrated product line is designed to make your business run smoother through the use of the latest computer and software technologies.
